Biomedical Informatics, BS

ESBMIBS

Learn to translate biomedical data into information and knowledge that improves health outcomes.

Program Description

Biomedical informatics is a multidisciplinary field that involves the generation, acquisition, management and analysis of biomedical and health data and its translation into information and knowledge for improving individual and population health.

The BS program in biomedical informatics curriculum includes biomedical informatics, computer science, biology, chemistry, mathematics and statistics. Students learn approaches to acquiring data, data management and knowledge representation, modeling and machine learning and using these capabilities to address problems in the biomedical and health domains. Students have the opportunity to do research alongside faculty who are experts in bioinformatics, imaging informatics, clinical informatics and population health informatics.

Graduates of the program have a broad set of biomedical informatics knowledge and skills enabling them to contribute to many areas of health and biomedicine in their future work.

Accelerated Program Options

This program allows students to obtain both a bachelor's and master's degree in as little as five years. It is offered as an accelerated bachelor's and master's degree with:

**Biomedical Informatics, MS**

Acceptance to the graduate program requires a separate application. During their junior year, eligible students are advised by their academic departments to apply.

Admission Requirements

**General University Admission Requirements:**
All students are required to meet general university admission requirements.

Change of Major Requirements

A current ASU student has no additional requirements for changing majors.

Students should refer to [https://changemajor.apps.asu.edu](https://changemajor.apps.asu.edu) for information about how to change a major to this program.

Transfer Options

ASU is committed to helping students thrive by offering tools that allow personalization of the transfer path to ASU. Students may use [MyPath2ASU™](#) to outline a list of recommended courses to take prior to transfer.

ASU has transfer partnerships in Arizona and across the country to create a simplified transfer experience for students. These pathway programs include exclusive benefits, tools and resources, and help students save time and money in their college journey. Students may learn more about these programs by visiting the admission site: [https://admission.asu.edu/transfer/pathway-programs](https://admission.asu.edu/transfer/pathway-programs).

Global Opportunities

**Global Experience**

Students gain valuable, resume-building experience when studying abroad. With over 250 programs available, study abroad allows students to tailor their experience to their unique interests and skill sets.
Students in biomedical informatics are able to expand their knowledge of how health care systems impact society in a variety of cultures and experience new and unique information science and technology environments across the globe. [https://goglobal.asu.edu/](https://goglobal.asu.edu/)

The College of Health Solutions recommends the following study abroad programs for students majoring in biomedical informatics: [https://mystudyabroad.asu.edu/students/major/chs/biomedical-informatics](https://mystudyabroad.asu.edu/students/major/chs/biomedical-informatics).

### Career Opportunities

Graduates with a degree in the rapidly expanding field of biomedical informatics are prepared for careers in a wide range of settings. They are employed in positions such as data science analysts, bioinformaticians, software engineers, and public health informatics scientists, among others. Those with interests in life sciences and technology may see this program as a unique way to combine the two. Others may find this degree the first step toward medical school or advanced medical research or to continued graduate-level study in biomedical informatics.

Career examples include but are not limited to those shown in the following list. Advanced degrees or certifications may be required for academic or clinical positions.
