Integrate your current health care background with innovation and leadership education with the BAS program in applied science with a focus on health innovation.

Program Description

The concentration in health innovation is designed for students with an AAS degree in allied health fields who want to lead transformative change in health through the creation of new products, processes and systems.

Students will have the opportunity to examine current evidence-based practice and health care policy through a lens of innovation using an integrated systems perspective, and they will begin to hone the skills necessary to be a leader of innovation in a health care context. Students with health-related backgrounds who would like to learn more about innovation and leadership within health care organizations may be interested in the health innovation concentration. Students with an Associate of Applied Science degree in business or a related field may also have interest if they have employment experience in the health industry.

At a Glance
