If you want to conduct innovative research and develop effective solutions to sustainability challenges, you will benefit from studying with leading sustainability scientists and scholars in this customizable program.

Program Description

Degree Awarded: PHD Sustainability

The PhD program in sustainability prepares students to become scientists and leaders in research and to investigate the urgent sustainability challenges of this century. The flexible, transdisciplinary nature of the program allows students to focus on problems of interest to them, drawing upon relevant knowledge from sustainability science and a variety of disciplines. This full-time program includes a high degree of faculty interaction and collaboration.

Graduates possess an advanced understanding of the dynamics of coupled social-ecological systems and use this knowledge to conduct original research to inform robust solutions to specific sustainability challenges. All sustainability doctoral students gain a better understanding of the need for a transdisciplinary approach to solving sustainability challenges as well as the ability to communicate their research effectively to academic and non-academic audiences alike.

In addition to the common learning outcomes, students are able to conduct research on particular sustainability challenges using theoretical lenses and methods from sustainability science and a range of complementary disciplines. Students learn to translate sustainability challenges to tractable research questions, develop a portfolio of quantitative and qualitative research methods to address these research questions, formulate and test hypotheses, utilize rigorous elicitation methods to gather qualitative and quantitative datasets, learn to engage with stakeholders to co-produce knowledge, use statistical and other analytic techniques to analyze data, and build and apply models of social-ecological systems. They develop expertise in the analysis of institutional policies and regulations and the design of the built environment and technologies to support sustainable development. They also develop the foundational knowledge of concepts and methods required to conduct interdisciplinary research and effectively communicate their findings across academic disciplines as well as to policymakers and the general public. Upon graduation they are equipped to lead others in the development of sustainable strategies at the local, national and global levels.
At a Glance

- **College/School:** [College of Global Futures](#)
- **Location:** Tempe campus

Degree Requirements

86 credit hours, a written comprehensive exam, a prospectus and a dissertation

**Required Core (8 credit hours)**
- SOS 510 Perspectives on Sustainability (3)
- SOS 520 Research Design and Methods for Sustainability (3)
- SOS 589 Community of Graduate Student Scholars (2)

**Solutions Workshop Electives (6 credit hours)**

**Open Electives (48 credit hours)**

**Research (12 credit hours)**
- SOS 792 Research (12)

**Culminating Experience (12 credit hours)**
- SOS 799 Dissertation (12)

Additional Curriculum Information

For electives, students should see the academic unit for the approved course list. Other coursework may be used with the approval of the academic unit. Only six credit hours of 400-level coursework can be included in the plan of study.

When approved by the student's supervisory committee and the Graduate College, this program allows up to 30 credit hours from a previously awarded master's degree to be used for this program. If students do not have a previously awarded master's degree, the remaining coursework is to be made up of appropriate electives.

Admission Requirements

Applicants must fulfill the requirements of both the Graduate College and the College of Global Futures.
Applicants are eligible to apply to the program if they have earned a bachelor's or master's degree, in any field, from a regionally accredited institution. The school encourages applicants with diverse educational backgrounds and experiences that are relevant to the school's core objectives.

Applicants must have a minimum cumulative GPA of 3.25 (scale is 4.00 = "A") in the last 60 hours of their first bachelor's degree program, or applicants must have a minimum cumulative GPA of 3.25 (scale is 4.00 = "A") in an applicable master's degree program.

All applicants must submit:

1. graduate admission application and application fee
2. official transcripts
3. statement of intent
4. GRE scores
5. three letters of recommendation
6. resume or curriculum vitae
7. proof of English proficiency

**Additional Application Information**

An applicant whose native language is not English must provide proof of English proficiency regardless of current residency.

The statement of intent should not exceed 600 words and should describe how the applicant's background will contribute to success in the program; describe how completion of the degree will support long-term career goals; elaborate on key research questions the applicant wishes to address or problems to solve as part of the plan of study; and, identify potential faculty advisors.

Letters of recommendation must be from three people who can attest to the applicant's academic and professional achievements. At least one letter should be academic in nature.

**Global Opportunities**

**Global Experience**

Study abroad is possible for graduate students, with more than 50 program opportunities spanning six continents. Faculty-directed programs tend to be the best fit for graduate students; taking courses over the summer or during academic breaks with ASU professors offers close mentorship and professional network growth in many fields of study while earning ASU credit. Exchange program participation is also possible with careful planning. [https://mystudyabroad.asu.edu/students/graduate-students](https://mystudyabroad.asu.edu/students/graduate-students)

Students may also participate in a School of Sustainability study abroad program ([https://schoolofsustainability.asu.edu/student-life/study-abroad](https://schoolofsustainability.asu.edu/student-life/study-abroad)). Many students in the program also conduct research abroad as part of their culminating experience.
Career Opportunities

Professionals with expertise in sustainability frameworks and interdisciplinary research are in high demand across industries, including business, academia, and government. Skills in critical thinking, teamwork, sustainability problem solving and research are valuable to businesses and institutions, many of which are in need of expertise to solve critical sustainability problems and introduce sustainability principles into their business models.

From the School of Sustainability's 2020 alumni employment survey, 100% of doctorate respondents are employed. Of those employed, 90% have jobs directly related to sustainability. Students can learn more about careers in sustainability and where graduates of sustainability doctoral programs are now employed by visiting [https://schoolofsustainability.asu.edu/careers/careers-in-sustainability](https://schoolofsustainability.asu.edu/careers/careers-in-sustainability).

Career examples include:

- chief sustainability officer
- data analyst
- director of program development
- environmental scientist
- professor
- program manager or coordinator
- research scientist
- sustainability consultant
- sustainability policy advisor
- sustainability specialist
- sustainable operations specialist
- water resources specialist
